1.0 Caratteristiche

La serie di riduttori epicicloidali EP è il risultato di un ottimo rapporto tra economicità del prezzo e garanzia di precisione delle caratteristiche di funzionamento.

I nostri riduttori sono stati realizzati per un utilizzo prevalente sulle seguenti applicazioni:

- Macchine utensili
- Macchine per la lavorazione del legno
- Linee transfer
- Macchine da stampa
- Macchine automatiche per confezionamento ed imballaggio
- Automazioni
- Manipolatori
- Macchine serigrafiche
- Guide lineari

La gamma dei riduttori è costituita da 5 grandezze (55, 75, 90, 120 e 155), a 1 e 2 stadi di riduzione, ognuna con due tipi di alberi uscita (tipo A e tipo T) e flange uscita di tipo A, T e Q.

1.0 Characteristics

The planetary gearbox EP series is the result of the outstanding ratio competitive price / precision guarantee with regard to operating features.

Our gearboxes are manufactured for prevailing utilization in the following applications:

- Machine tools
- Machines for woodworking
- Transfer machines
- Printing machines
- Automatic machines for packaging
- Automation
- Mechanical hands
- Silk-screen process machines
- Linear guides

The EP series is available in 5 sizes (55, 75, 90, 120 and 155), with 1 or 2 reduction stages, with two types of output shaft (A and T) and three types of output flange (A, T and Q).

1.0 Merkmale

Die EP Serie von Planetengetrieben ist das Ergebnis des hervorragenden Verhältnis guten Preis / garantie Präzision der Betriebseigenschaften. Unsere Getriebe sind für überwiegende Verwendung in der folgenden Applikationen hergestellt:

- Werkzeugmaschinen
- Holzbearbeitungsmaschinen
- Transfermaschinen
- Druckmaschinen
- Automatische Verpackungsmaschinen
- Automation
- Manipulatoren
- Siebdruckmaschinen
- Linearführungen

Die EP Serie ist in 5 Größen (55, 75, 90, 120 und 155) mit 1 oder 2 Untersetzungsstufen, mit zwei Typen von Abtriebswellen (A und T) und drei Typen von Abtriebsflanschen (A, T und Q) verfügbar.

Corpo: costruito in acciaio, garantisce robustezza e una elevata affidabilità nel tempo.

Flange: le flange in entrata ed in uscita sono costruite in alluminio e sono disponibili in molteplici varianti costruttive.

Alberi: sono costruiti in acciaio legato bonificato.

Ingranaggi: in acciaio legato da cementazione e tempra, con dentature rettificate.

Cuscinetti: di elevata qualità opportunamente dimensionati per garantire elevate durate e silenziosità di funzionamento.

Housing: made of special nitrided steel to assure strength, high reliability and long life.

Flanges: input and output flanges made of aluminium and available in several versions.

Shafts: made of hardened and tempered alloy steel.

Gears: made of casehardened and tempered alloy steel, with ground toothing.

Bearings: high quality and suitably sized to assure long life and noiseless working.

Gehäuse: aus Spezial-Nitrierstahl. Garantiert Robustheit und dauerhaft hohe Zuverlässigkeit.

Ein- u. Ausgangsflansche: aus Aluminium, in zahlreichen Varianten lieferbar.

Wellen: aus vergütetem Legierungsstahl.

Zahnräder: aus Einsatzstahl mit geschliffenen Zahnflanken.

Lager: sind hochwertig und zweckmäßig bemessen, um eine lange Lebensdauer und einen geräuscharmen Lauf zu garantieren.

1.2 Selezione

La selezione dei riduttori epicicloidali EP deve essere effettuata valutando se il servizio è intermittente o continuo verificando le seguenti relazioni.

1) Per servizio intermittente:

$$T_m \cdot i \cdot R_D \cdot fc \leq T_{2N}$$

2) Per servizio continuo:

$$T_m \cdot i \cdot R_D \cdot fc / 0.65 \leq T_{2N}$$

dove:

T_m = coppia nominale del motore (Nm)

i = rapporto di trasmissione del riduttore

R_D = rendimento dinamico

fc = fattore ciclo (vedi tabella)

1.2 Selection

The selection of planetary gearboxes EP series has to be made after the checking of service factor. For intermittent or continuous duty it is necessary to apply the following formulas:

1) Intermittent duty:

$$T_m \cdot i \cdot R_D \cdot fc \leq T_{2N}$$

2) Continuous duty:

$$T_m \cdot i \cdot R_D \cdot fc / 0.65 \leq T_{2N}$$

where:

T_m = nominal torque of motor (Nm)

i = transmission ratio of gearbox

R_D = dynamic efficiency

fc = cycle factor (see table)

1.2 Getriebeauswahl

Bei der Auswahl der Planetengetriebe EP muß berücksichtigt werden, ob diese im Aussetzbetrieb oder im Dauerbetrieb eingesetzt werden:

1) Aussetzbetrieb:

$$T_m \cdot i \cdot R_D \cdot fc \leq T_{2N}$$

2) Dauerbetrieb:

$$T_m \cdot i \cdot R_D \cdot fc / 0.65 \leq T_{2N}$$

wobei:

T_m = Nennmoment des Motors (Nm)

i = Untersetzungsverhältnis

R_D = Dynamischer Wirkungsgrad

fc = Zyklusfaktor (s. Tabelle)

Cicli/ora - cycle/h - Zyklen/h	≤ 1000	1000/2000	2000/3000
fc	1	1.2/1.5	1.5/2

Nelle applicazioni dove sono previsti cicli di funzionamento caratterizzati da frequenti accelerazioni è necessario verificare che la coppia massima di accelerazione sia uguale o inferiore al valore di T_{2A} indicato nelle tabelle.

For application with operation cycles based on frequent accelerations it is necessary to verify that max acceleration torque is equal or inferior to the T_{2A} value shown in the tables.

Bei Anwendungen mit häufigen Beschleunigungen muß sichergestellt werden, daß das maximale Beschleunigungsmoment nicht höher ist als die in der Tabelle aufgeführten Werte T_{2A} .

1.3 Gioco angolare (α_{\max})

Gioco massimo [arcmin] misurato sull'albero uscita, con albero entrata bloccato applicando una coppia pari al 2% della coppia nominale.

1.3 Backlash (α_{\max})

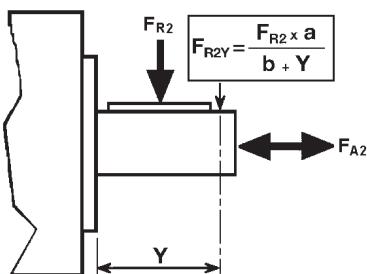

Max. backlash measured on output shaft by torque equals to 2% of the nominal torque value with input shaft blocked.

1.3 Spiel (α_{\max})

Maximales Spiel [arcmin], gemessen an der Abtriebswelle bei blockierter Eingangswelle mit 2% des Nennmoments.

1.3 Carichi radiali e assiali su albero lento

Nella tabella delle prestazioni sono indicati i valori, espressi in N, dei carichi assiali e radiali ammissibili alle diverse velocità per una durata dei cuscinetti di 20.000 ore. Il carico radiale F_{R2} si considera applicato ad una distanza dalla battuta pari alla metà della lunghezza dell'albero lento. Per distanze y diverse, è possibile calcolare il nuovo carico massimo ammissibile F_{R2Y} utilizzando formula e coefficienti indicati nella tabella.

1.3 Radial and axial load on output shaft

The table of performances shows admissible axial and radial load values expressed in N for different speeds and for a bearing life of 20.000 hours. Radial load F_{R2} calculations have been based on loads applied to the center line of the output shaft extension. For different y distance it is possible to calculate the new maximum admissible load by using formula and coefficient shown in the table.

1.3 Radial-and Axiallasten an der Ausgangswelle

Die Leistungstabelle enthält die in N ausgedrückten Werte der Axial- und Radiallasten für verschiedene Umdrehungszahlen. Diesen Werten liegt eine Lebensdauer der Lager von 20.000 Stunden zugrunde. Die Radiallast F_{R2} greift hierbei auf der Mitte der Abtriebswelle an. Greift die Radiallast an einem anderen Punkt der Abtriebswelle an, so kann man die zulässige Radiallast mit der folgenden Formel sowie den dazugehörigen Koeffizienten berechnen:

	EP 55	EP 75	EP 90	EP 120	EP 155
a	27	46	56	77	95
b	18	32	39	52	64

1.4 Lubrificazione

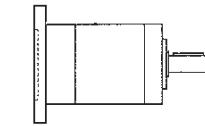

I riduttori EP sono forniti completi di lubrificante a vita pertanto non necessitano di manutenzione. In fase di ordine specificare la posizione di montaggio.

1.4 Lubrication

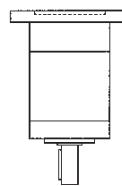

EP gearboxes are supplied filled with long-life lubricant and do not require any maintenance. When ordering it is important to specify the exact mounting position.

1.4 Schmierung

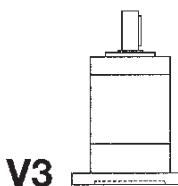

Die Planetengetriebe EP werden inklusive Dauerschmierung geliefert und sind wartungsfrei. Bei der Bestellung bitte die Einbauposition angeben.

* Per assemblare il motore è necessario smontare la flangia dal riduttore (vedere **schema di montaggio 2** a pag. 17).

* To mount the motor it is necessary to remove the gearbox flange (see **assembly drawing 2** on page 17).

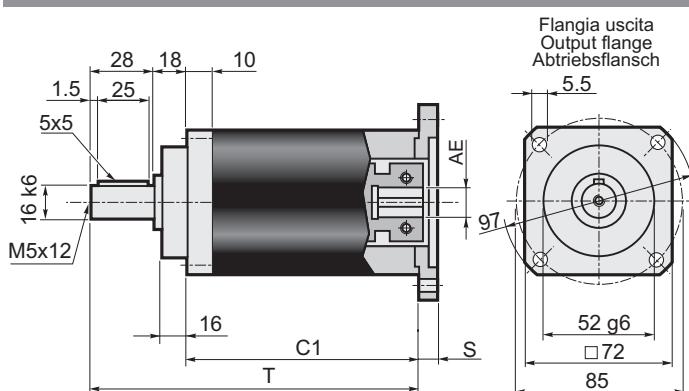

* Vor dem Einbauen des Motors soll die Getriebeblafansch abmontiert werden (siehe **Bauanleitung 2** auf Seite 17).

* Per assemblare il motore è necessario smontare la flangia dal riduttore (vedere **schema di montaggio 2** a pag. 17).

* To mount the motor it is necessary to remove the gearbox flange (see **assembly drawing 2** on page 17).

* Vor dem Einbauen des Motors soll die Getriebeblafansch abmontiert werden (siehe **Bauanleitung 2** auf Seite 17).

1.7 Istruzioni per il montaggio del motore
1.7 Instructions for assembly of motor
1.7 Anleitung für Motormontage
Schema di montaggio / Assembly drawing / Bauanleitung 1

- 1 - Allentare la vite di serraggio del morsetto (DV)
- 2 - Estrarre la lingetta (LM) dall'albero motore
- 3 - Pulire le superfici di contatto delle flange motore e riduttore
- 4 - Calettare il motore sul riduttore evitando urti
- 5 - Stringere le viti di assemblaggio (FV) in modo alternato
- 6 - Serrare lavite (o le viti) del morsetto (DV) alla coppia (CS) indicata in tabella

- 1 - Unloose the fastening screw (or screws) of the clamp (DV)
- 2 - Remove the key (LM) from motor shaft
- 3 - Clean the contact surfaces of motor flange/gearbox flange
- 4 - Avoid impacts while fitting motor to gearbox
- 5 - Tighten the assembling screws (FV) alternatively
- 6 - Tighten the clamp screw, or screws (DV) according to the torque (CS) reported in the table

- 1 - die Befestigungsschraube der Klammer (DV) lockern
- 2 - die Feder (LM) aus Getriebe und Motorwelle ziehen
- 3 - die Motorflansch / Getriebeflansch Kontaktfläche reinigen
- 4 - Motor und Getriebe ohne Stöße verkeilen
- 5 - die Befestigungsschrauben (FV) abwechselnd anziehen
- 6 - die Schraube (oder Schrauben) der Klammer (DV) zu dem in der Tabelle angegebenen Anzugsmoment anziehen
